

# Dataset

The dataset contains categorical data about which political party was elected in each of the UK’s 650 constituencies, with 10 different parties winning in at least one constituency

# Task

Find which party was elected in Edinburgh and London respectively. You need try it from large canvas to small canvas.

## When popup appears, you can speak aloud:

What is your decision/choice?

Why did you choose it?

What confused you?

Are there something you want to do but the system doesn't offer?

How closely did your choice align with your expectation?

## When you finish the task, please tell me
